

Earth, Wind & Firewalls

See why Cisco's critically acclaimed Firewalls are leading the charts

Overview

Cisco Secure Firewalls offer hardware and software firewalls designed to block threats and respond quickly to breaches.

With a range of physical appliances for campuses, branches, data centres and IoT/OT environments as well as virtual firewall options for cloud deployments.

Firewall Market Opportunity

73% 73% of enterprise IT and security decision makers say they lack visibility into threats and ongoing attacks.¹

48% 48% of enterprise IT and security decision makers say their organizations were attacked in product environments, resulting in loss.¹

1. Cisco, cloud-native security survey of ~500 enterprise IT and security decision makers

Cisco is the industry's first to earn **AAA rating** in advanced performance test

Maintains steady performance even under heavy load

Keeps important business apps and functions running smoothly

Maintains high speeds even during threat inspections

NetSecOPEN
Performance Testing
100% block rate

For common vulnerabilities and exposures (CVEs) under real-world, heavy traffic conditions.

Cisco is turning up the volume for firewall security

3x better price-performance than competitors

Global threat intelligence with Cisco Talos

AI/ML for zero-day attack detection

Centralized AI-driven management

Key Firewall Series

1000 Series: Easy to manage, detects more threats and is cost effective, perfect for SMBs.

1200, 200, 3100, 4200, 6100 Series: A scalable option featuring increased throughput and advanced threat detection. Perfect for the Mid-Market.

ISA3000: Ruggedized firewall for industrial and operational technology environments.

Threat Defence Virtual (FTDv): Cisco's Virtual Firewall for private and public cloud deployment featuring unified policy and management.

Key Benefits and Competitor Differentiators

- Next-generation firewall capabilities with integrated IPS, VPN, and decryption
- Real-time threat intelligence powered by Cisco Talos
- Integration with the Cisco Security portfolio and Splunk for enhanced security insights and response
- More flexibility and stronger protection than competitors
- Independent multi-instance support
- No endpoint agents
- Ability to refresh or restart instances without downtime
